

# Focus Physiology – Prompt for AI

Use this document to instruct another AI to build / fix the app.

## Current Interface Screenshot

## Copy everything below and paste it to the other AI:

I already have this interface (keep the exact same design and sidebar):

- Sidebar: Dashboard, Storyteller Quest, RPG World, Stake Arena, Tasks
- Soft pastel colors (orange, pink, purple)
- Top stress bar
- Storyteller Quest page with:
  - “Lore-Craft Lesson Storyteller” title
  - Buttons: Paste Notes, Upload PDF, Camera Snap
  - Big text area
  - Button: “Transform into RPG Adventure”

What I need you to fix/build:

### 1. Storyteller Quest

- Must be able to type freely in the text area
- Upload PDF must work
- When I click “Transform into RPG Adventure”, it should generate and show a real story (not jump directly to the game)
- The story should be based on the notes I pasted/uploaded

### 2. RPG World

- I want a simple but fun top-down game that feels like a mini Stardew Valley
- Pixel-style if possible
- Player can walk smoothly with Arrow keys / WASD

- There are enemies
- Walking into an enemy starts a short quiz battle using questions from my uploaded notes
- Correct answers damage the enemy
- Player has HP, XP and Level
- Must not glitch or freeze after 2 steps

### **3. General**

- Everything must work
- Keep the same visual style I already have
- Prefer simple and stable over complicated

Please give me the complete working React code (single App.jsx if possible) that matches this.
